

InfiNet – Fast & Reliable Business Grade Internet

InfiNet is a contended Internet service which offers high performance business Internet access at a flat monthly rate. You can choose bandwidth required, and with no limit on the total volume of traffic, InfiNet is ideal to access cloud services and other Internet applications.

The perfect starting point for a business upgrade from ADSL/VDSL or ISDN. High speed reliable internet packages with symmetrical upload and download speeds. InfiNet provides a low contention ratio of 10:1 or less whereas the industry standard is 20:1 or higher.

InfiNet offers you the following benefits:

- ◆ An uncapped service (you will never get charged for going over your limit)
- ◆ Significantly lower contention rate than industry standards (we offer less than 10:1 whereas the standard is 20:1 or higher)
- ◆ Opportunity to implement cloud solutions and VoIP (Voice Over IP) to reduce your costs

Testimonial

“We choose Fibreplus to provide a quality fast fibre internet connection, from an internal focus for accessing our international servers and IP communications between offices. From an external perspective the hosting services to our customers need to be fast and more importantly reliable.

Fibreplus had the product, knowledge and flexibility we require. Having run on this service for a number of months now we are more than happy with the service.”

Sean Hywood, Managing Director, Focus On Business

* Prices exclude GST and are based on a 12-month contract * A one-off fee of \$315+GST applies for all new installs and changes post contract			

FAQs

What is InfiNet?

InfiNet is an ultra-fast fibre based solution for businesses, offering high speed, cost effective collaboration and flat rate access to public Internet.

What is the CIR?

Your InfiNet Access service comes with 10Mbit/s of CIR (Committed Information Rate) - this is a guaranteed minimum speed that the service will run over. Please note this is not a CIR on the Internet Service, but rather on the underlying access

What is a Contention Rate?

Internet bandwidth is generally shared with other customers. How many people you share with is known as the contention ratio. Normally you have a contention ratio of 50:1, what means that you are sharing your connection with 50 other customers. This means that the bandwidth you purchase is the maximum speed you could achieve, but in reality your average speed will be lower than this.

To understand contention, imagine cars and a motorway. Your contention ratio refers to how many cars share your off-ramp with you. Obviously the more cars there are, the slower your access to information will be.

What is the minimum contract length?

We don't believe in locking you in for an extended period, so our minimum term is one year only.

Where is InfiNet currently available?

We can offer InfiNet services to all offices in the following UFB areas - Auckland, Hamilton, Tauranga, New Plymouth, Napier/Hastings, Wellington and Christchurch.

Can I increase my InfiNet Internet bandwidth during my contract term?

You can increase your bandwidth at any time by adding an additional block of 10Mbit/s to your service. The additional monthly charge for this will be added to your bill and you will pay a one-off change fee.
